## **DETAILED ACTION**

### ***Election/Restriction***

Claims 1-20 and 22-42 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Election was made **without** traverse in the response filed September 2, 2003.

### ***Information Disclosure Statement***

Applicant has submitted an IDS and indicated that the references had been submitted with the parent and not re-submitted with the instant application. The examiner has reviewed the file for the parent as well as a related case, S.N. 09/824,827, only a few of the references were with the file and available for consideration. These have been initialed on the PTO-1449. In order for the other references to be considered and made of record, Applicant is required to submit them in response to this Office action. The examiner regrets any inconvenience.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 21 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1623

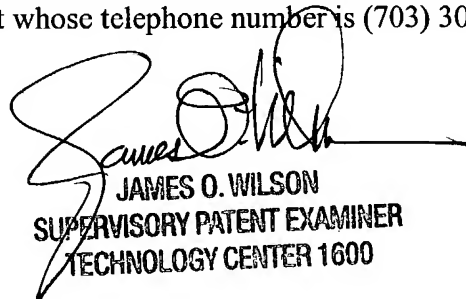

The claim recites a number of glycosides wherein the variable "R" represents the glycosyl portion of the molecule, which is attached to the divalent sulfur in the thiosulfonate moiety. Some of the compounds, such as one wherein  $R = \beta\text{-Glc}$ , represent thioglycosides, with the divalent sulfur attached to the glucose ring. Others are not that clear. For example, when  $R = \text{Et-}\beta\text{-Glc}$ , this would appear to represent a C-glycoside wherein the thiosulfonate is attached to the ring through an ethylene linker. However, from a review of the specification – see Figures 6 and 7 – it appears that possibly what is intended is an O-glycoside wherein the thiosulfonate is attached to the ring through an ethyloxy linker. This uncertainty with regard to nomenclature renders the claim vague and indefinite.
